

Question 1

2. Decide whether you think the following statement is true or false. If it is true, give a short explanation. If it is false, give a counterexample.

Let G be an arbitrary flow network, with a source s , a sink t , and a positive integer capacity c_e on every edge e ; and let (A,B) be a minimum $s - t$ cut with respect to these capacities $\{c_e : e \in E\}$. Now suppose we add 1 to every capacity; then (A,B) is still a minimum $s - t$ cut with respect to these new capacities $\{1 + c_e : e \in E\}$.
