

Divide and conquer

- Merge Sort
- Master Theorem
- Divide-and conquer paradigm
- Other algorithms by D&C

Merge Sort

Merge-Sort A[1..n]

- 1. If n = 1, done.
- Recursively sort A[1..n/2]
 and A[n/2+1..n]
- 3. "Merge" the 2 sorted lists.

Jon von Neumann (1945)

Merge Sort

```
MergeSort(A, left, right) {
  if (left < right) {</pre>
      mid = floor((left + right) / 2);
      MergeSort(A, left, mid);
      MergeSort(A, mid+1, right);
      Merge(A, left, mid, right);
// Merge() takes two sorted subarrays of A and
// merges them into a single sorted subarray of A
      (how long should this take?)
```

Analysis of Merge Sort

Statement

Effort

```
\label{eq:mergeSort} \begin{array}{lll} \text{MergeSort}(A, \text{ left, right}) & & & & & & & & & \\ & \text{if (left < right)} & & & & & & & & \\ & \text{mid} & = & & & & & & \\ & \text{mid} & = & & & & & & \\ & \text{mid} & = & & & & & \\ & \text{MergeSort}(A, \text{ left, mid}) & & & & & \\ & \text{MergeSort}(A, \text{ mid+1, right}) & & & & & \\ & \text{Merge}(A, \text{ left, mid, right}) & & & & & \\ & \text{Merge}(A, \text{ left, mid, right}) & & & & & \\ & \text{Merge}(A, \text{ left, mid, right}) & & & & & \\ & \text{Merge}(A, \text{ left, mid, right}) & & & & & \\ & \text{Merge}(A, \text{ left, mid, right}) & & & & & \\ & \text{Merge}(A, \text{ left, mid, right}) & & & & & \\ & \text{Merge}(A, \text{ left, mid, right}) & & & & \\ & \text{Merge}(A, \text{ left, mid, right}) & & & & \\ & \text{Merge}(A, \text{ left, mid, right}) & & & & \\ & \text{Merge}(A, \text{ left, mid, right}) & & & & \\ & \text{Merge}(A, \text{ left, mid, right}) & & & & \\ & \text{Merge}(A, \text{ left, mid, right}) & & & & \\ & \text{Merge}(A, \text{ left, mid, right}) & & & & \\ & \text{Merge}(A, \text{ left, mid, right}) & & & & \\ & \text{Merge}(A, \text{ left, mid, right}) & & & & \\ & \text{Merge}(A, \text{ left, mid, right}) & & & \\ & \text{Merge}(A, \text{ left, mid, right}) & & & \\ & \text{Merge}(A, \text{ left, mid, right}) & & & \\ & \text{Merge}(A, \text{ left, mid, right}) & & & \\ & \text{Merge}(A, \text{ left, mid, right}) & & & \\ & \text{Merge}(A, \text{ left, mid, right}) & & & \\ & \text{Merge}(A, \text{ left, mid, right}) & & & \\ & \text{Merge}(A, \text{ left, mid, right}) & & & \\ & \text{Merge}(A, \text{ left, mid, right}) & & & \\ & \text{Merge}(A, \text{ left, mid, right}) & & & \\ & \text{Merge}(A, \text{ left, mid, right}) & & & \\ & \text{Merge}(A, \text{ left, mid, right}) & & & \\ & \text{Merge}(A, \text{ left, mid, right}) & & & \\ & \text{Merge}(A, \text{ left, mid, right}) & & & \\ & \text{Merge}(A, \text{ left, mid, right}) & & & \\ & \text{Merge}(A, \text{ left, mid, right}) & & & \\ & \text{Merge}(A, \text{ left, mid, right}) & & & \\ & \text{Merge}(A, \text{ left, mid, right}) & & & \\ & \text{Merge}(A, \text{ left, mid, right}) & & & \\ & \text{Merge}(A, \text{ left, mid, right}) & & & \\ & \text{Merge}(A, \text{ left, mid, right}) & & & \\ & \text{Merge}(A, \text{ left, mid, right}) & & & \\ & \text{Merge}(A, \text{ left, mid, right}) & & & \\ & \text{Merge}(A, \text{ left, mid, right})
```

Recurrences

The expression:

$$T(n) = \begin{cases} c & n = 1 \\ 2T\left(\frac{n}{2}\right) + cn & n > 1 \end{cases}$$

is a recurrence.

 Recurrence: an equation that describes a function in terms of its value on smaller functions

Structure of merge sort algorithm

- break problem into similar (smaller) subproblems
- 2. recursively solve subproblems
- combine solutions to produce final answer

Example of Merge Sort

1	5	2	4	6	3	2	6	
1	5	2	4	6	3	2	6	
1	5	2	4	6	3	2	6	
1	5	2	4	6	3	2	6	
1	5	2	4	3	6	2	6	
1	2	4	5	2	3	6	6	
1	2	2	3	4	5	6	6	

Divide-and-conquer paradigm

- 1. Divide problem into subproblems.
- 2. Conquer subproblems by solving recursively.
- 3. Combine subproblem solutions.

Example of D&C Paradigm

Merge sort as Divide-and-conquer algorithm

- 1. <u>Divide</u>: Divide *n*-array into two *n*/2-subarrays.
- 2. Conquer: Sort the two subarrays recursively.
- 3. Combine: Linear-time merge.

Recurrence for Merge sort

$$T(n) = 2 \qquad T(\qquad n/2)$$

$$+ \qquad \Theta(n)$$

$$+ \qquad \Theta(n)$$

$$+ \qquad \text{work dividing \& combining}$$

$$T(n) = 2T(n/2) + \Theta(n)$$

A Useful Recurrence Relation

Mergesort recurrence.

$$T(n) \leq \begin{cases} 0 & \text{if } n = 1 \\ T(\lceil n/2 \rceil) + T(\lceil n/2 \rfloor) + n & \text{otherwise} \end{cases}$$
solve left half solve right half

• Solution. $T(n) = O(n \log_2 n)$.

 Assorted proofs. We describe several ways to prove this recurrence. Initially we assume n is a power of 2 and replace ≤ with =.

Proof by Recursion Tree

$$T(n) = \begin{cases} 0 & \text{if } n = 1 \\ 2T(n/2) + n & \text{otherwise} \end{cases}$$
sorting both halves merging

Proof by Telescoping

Claim. If T(n) satisfies this recurrence, then T(n) = n log₂ n.

 $\log_2 n$

$$T(n) = \begin{cases} 0 & \text{if } n = 1\\ 2T(n/2) + n & \text{otherwise} \end{cases}$$
sorting both halves merging

assumes n is a power of 2

• Pf. For n > 1:
$$\frac{T(n)}{n} = \frac{2T(n/2)}{n} + 1$$

$$= \frac{T(n/2)}{n/2} + 1$$

$$= \frac{T(n/4)}{n/4} + 1 + 1$$
...
$$= \frac{T(n/n)}{n/n} + \frac{1 + \cdots}{n}$$

Proof by Induction

• Claim. If T(n) satisfies this recurrence, then $T(n) = n \log_2 n$.

$$T(n) = \begin{cases} 0 & \text{if } n = 1\\ 2T(n/2) + n & \text{otherwise} \end{cases}$$
sorting both halves merging

assumes n is a power of 2

- Pf. (by induction on n)
 - Base case: n = 1.
 - Inductive hypothesis: $T(n) = n \log_2 n$.
 - Goal: show that $T(2n) = 2n \log_2 (2n)$.

$$T(2n) = 2T(n) + 2n$$

= $2n \log_2 n + 2n$
= $2n(\log_2(2n)-1) + 2n$
= $2n \log_2(2n)$

Proof by Induction

Claim. If T(n) satisfies this recurrence, then T(n) = n \[\text{lg n} \].

$$T(n) \leq \begin{cases} 0 & \text{if } n = 1 \\ T(\lceil n/2 \rceil) + T(\lceil n/2 \rfloor) + n & \text{otherwise} \end{cases}$$
solve left half solve right half merging

assumes n is a power of 2

- Pf. (by induction on n)
 - Base case: n = 1.
 - Define $n_1 = \lfloor n / 2 \rfloor$, $n_2 = \lceil n / 2 \rceil$.
 - Induction step: assume true for 1, 2, ..., n-1.

$$T(n) \leq T(n_1) + T(n_2) + n$$

$$\leq n_1 \lceil \lg n_1 \rceil + n_2 \lceil \lg n_2 \rceil + n$$

$$\leq n_1 \lceil \lg n_2 \rceil + n_2 \lceil \lg n_2 \rceil + n$$

$$= n \lceil \lg n_2 \rceil + n$$

$$\leq n(\lceil \lg n \rceil - 1) + n$$

$$= n \lceil \lg n \rceil$$

$$n_{2} = |n/2|$$

$$\leq \lceil 2^{\lceil \lg n \rceil} / 2 \rceil$$

$$= 2^{\lceil \lg n \rceil} / 2$$

$$\Rightarrow \lg n_{2} \leq \lceil \lg n \rceil - 1$$

Is there a Simple method?
